

Inline filter with filter element according to Hengst standard

Type 16 FE 2500 ... 7500

RE 51403

Edition: 2021-04

Replaces: -

- ▶ Sizes according to **according to Hengst standard:**
2500 ... 7500
- ▶ Nominal pressure of 16 bar [232 psi]
- ▶ Connection up to DN 300
- ▶ Operating temperature of -10 °C ... +100 °C [14 °F ... 212 °F]

Features

Inline filters are used in hydraulic systems for separating solid materials from fluids and lubricating oils. They are intended for installation in piping.

They distinguish themselves by the following:

- ▶ Filter for inline installation, return flow or bypass with several filter elements in one filter housing
- ▶ Special highly efficient filter materials
- ▶ Filtration of very fine particles and high dirt holding capacity across a broad pressure differential range
- ▶ High collapse rating of the filter elements
- ▶ Optionally equipped with mechanical/optical maintenance indicator with memory function
- ▶ Optional equipment with various electronic switching elements, modular design
- ▶ Optional bypass valves integrated in the filter elements

Filter design

Easy selection of the filter size is made possible by the FilterSelect online tool. The filter can be designed using the operating pressure, flow and fluid system parameters. The required filter rating is based on the application, the sensitivity to contamination of the components and the environmental conditions.

The program leads you through the menu on a step-by-step basis.

A documentation of the filter selection can finally be created in the form of a PDF file. This file contains the entered parameters, the designed filter with material number including spare parts, and the pressure loss curves.

Function, section

The 16 FE inline filter is suitable for inline installation.

Essentially, it consists of filter housing (1), a filter cover (2), several filter elements (3) and mechanical/optical maintenance indicator (4) and an optional cover removal tool (5). The fluid reaches the filter element (3), where it is cleaned, via the inlet. The dirt particles filtered out collect in the filter elements (3). The filter elements are filled indirectly.

The filtered fluid enters the hydraulic circuit via the outlet. The filter housing and all connection elements are designed so that pressure peaks – as they may occur, for example, in the event of abrupt opening of large control valves due to the accelerated fluid quantity – can be securely absorbed. A bleed screw (6) and drain screw (7) is included in standard equipment for all sizes.

Instead of a bleed screw, an optional bleed valve – option code E – (6) is possible.

An electronic switching element can be added to the mechanical/optical maintenance indicator in order to integrate the maintenance indicator. The electronic switching element (8) must be attached to the mechanical/optical maintenance indicator (4) and held by means of a locking ring. The electronic switching elements are connected by means of a mating connector or cable connection. The electronic switching element must be ordered separately.

16 FE 2500 ... 6500

16 FE 7000 ... 7500

⚠ WARNING!

- If the maintenance indicator warning is not adhered to, and the filter element is not changed on indication, the by-pass valve will open with the increase in differential pressure and part of the flow will be diverted passed the filter element, to the clean side without being filtered. Thus, effective filtration is no longer guaranteed.

Filter element			
Glass fiber material PWR..		Single-use element on the basis of inorganic fiber	
		Filtration ratio according to ISO 16889 of up to $\Delta p = 5$ bar [72.5 psi]	Achievable oil cleanliness according to ISO 4406 [SAE-AS 4059]
	PWR20	$\beta_{20}(c) \geq 200$	19/16/12 – 22/17/14
	PWR10	$\beta_{10}(c) \geq 200$	17/14/10 – 21/16/13
	PWR6	$\beta_6(c) \geq 200$	15/12/10 – 19/14/11
	PWR3	$\beta_5(c) \geq 200$	13/10/8 – 17/13/10
Permissible pressure differential	▶ A00	Bar [psi]	30 [435]

For detailed information on Hengst filter elements, please refer to data sheet 51420.

Compatibility with permitted hydraulic fluids

Hydraulic fluid	Classification	Suitable sealing materials	Standards
Mineral oil	HLP	NBR	DIN 51524
Bio-degradable	▶ Insoluble in water	HETG	VDMA 24568
		HEES	
	▶ Soluble in water	HEPG	VDMA 24568
Flame resistant	▶ Water free	HFDU, HFDR	VDMA 24317
	▶ Containing water	HFAS	DIN 24320
		HFAE	
		HFC	
		NBR	VDMA 24317

Important information on hydraulic fluids:

- ▶ For more information and data on the use of other hydraulic fluids, please refer to data sheet 90220 or contact us!
- ▶ **Flame resistant - containing water:** due to possible chemical reactions with materials or surface coatings of machine and system components, the service life with these hydraulic fluids may be less than expected.

Filter materials made of filter paper (cellulose) must not be used, filter elements with glass fiber filter material or wire mesh must be used instead.

- ▶ **Bio-degradable:** If filter materials made of filter paper are used, the filter life may be shorter than expected due to material incompatibility and swelling.

Assembly, commissioning, maintenance

Assembly

- ▶ The max. operating pressure of the system must not exceed the max. permissible operating pressure of the filter (see name plate).
- ▶ During assembly of the filter (see also chapter “Tightening torque”), the flow direction (direction arrows) and the required servicing height of the filter elements (see chapter “Dimensions”) are to be considered.
- ▶ The maintenance indicator must be arranged so it is easily visible in operation.
- ▶ For stability reasons, the cover must not be pivoted before the assembly on filters with a cover remover.
- ▶ Remove the plastic plugs from the filter inlet and outlet.
- ▶ The filter must be installed vertically.
- ▶ Fasten the filter feet to the floor or frame. Ensure that the system is assembled without tension stress.
- ▶ The optional electronic maintenance indicator is connected via the electronic switching element with one or two switching points, which is attached to the mechanical/optical maintenance indicator and held by means of the locking ring.

Commissioning

- ▶ Commission the system and bleed the filter until fluid begins to escape from the bleeding point.

Maintenance

- ▶ If, at operating temperature, the red indicator pin reaches out of the mechanical/optical maintenance indicator and/or the switching process is triggered in the electronic switching element, the filter element is contaminated and needs to be replaced or cleaned. For more details, see data sheet 51450.

- ▶ The material number of the corresponding replacement filter elements is indicated on the name plate of the complete filter. It must correspond to the material number on the filter elements.
- ▶ Decommission the system.
- ▶ Open the bleed screw or bleed valve and relieve the pressure
- ▶ After undoing and removing the cover screws, the filter cover is removed by hand and placed on a clean surface.
Alternatively, the cover can be removed from the filter by turning the hand wheel of the optional cover remover counter-clockwise before being swiveled to the side.
- ▶ The fluid on the dirt side can be drained via the lateral drain screw. If necessary, additional fluid can be drained via the lower drain screw (clean side).
- ▶ Remove the filter elements from the spigot by rotating them slightly.
- ▶ Clean the filter components, if necessary.
- ▶ Check the cover seal, mounting screws and nuts for damage and replace them, if necessary.
For suitable seal kits, refer to chapter “Spare parts”.
- ▶ Filter elements made of wire mesh can be cleaned. For detailed cleaning instructions, refer to data sheet 51420.
- ▶ Install the new or cleaned filter elements on the respective spigots again by slightly rotating them.
- ▶ The filter is to be assembled in reverse order.
- ▶ The torque specifications (Tightening torques chapter) are to be observed.
- ▶ Commission the system and bleed the filter until fluid begins to escape from the bleeding point.

WARNING!

- | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> ▶ Assemble and disassemble only with depressurized system! ▶ Filter is under pressure! ▶ Open the cover screws only if it is depressurized! ▶ Do not exchange the maintenance indicator while the filter is under pressure! | <ul style="list-style-type: none"> ▶ If the flow direction is not considered during assembly, the filter element will be destroyed. Particles will enter the system and damage the downstream components. |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Notices:

- ▶ All maintenance of the filter should be performed by trained specialists.
- ▶ Proper function and safety are only guaranteed if original Hengst filter elements and spare parts are used.
- ▶ Warranty becomes void if the delivered item is modified by the ordering party or third parties or improperly mounted, installed, serviced, repaired, used or exposed to environmental condition that do not comply with the installation conditions.

Tightening torques (dimensions in mm [inch])

Cover mounting

Series 16 FE...	2500 ... 3000	4000	6000	7000 ... 7500
Screw	M16		M20	
Tightening torque at $\mu_{\text{tot}} = 0.14$	Nm [lbf-ft]		215 ± 20 [159 ± 15]	
Quantity	8	12	16	16
Recommended property class of screw	8.8			

Bleed screw

Series 16 FE...	2500 ... 3000	4000	6000	7000 ... 7500
Screw	G1/4			
Tightening torque at $\mu_{\text{tot}} = 0.14$	Nm [lbf-ft]			
Quantity	30 ± 3 [22 ± 2]			
Recommended property class of screw	1			
	1.4571			

Drain screw

Series 16 FE...	2500 ... 3000	4000	6000	7000 ... 7500
Screw	G1			
Tightening torque at $\mu_{\text{tot}} = 0.14$	Nm [lbf-ft]

Tightening torque of mechanical/optical maintenance indicator	Nm [lbf-ft]			
Tightening torque of cubic connector screw switching element EN-175301-803	Max. 50 [37]			
	M3 / 0.5 [0.4]			

Directives and standardization

Product validation

Hengst filters, the filter elements built into them and filter accessories are tested and quality-monitored according to different ISO test standards:

Pressure pulse test	ISO 10771:2015-08
Filtration performance test (multipass test)	ISO 16889:2008-06
Δp (pressure loss) characteristic curves	ISO 3968:2001-12
Compatibility with hydraulic fluid	ISO 2943:1998-11
Collapse pressure test	ISO 2941:2009-04

The development, manufacture and assembly of Hengst industrial filters and Hengst filter elements is carried out within the framework of a certified quality management system in accordance with ISO 9001:2015.

Directives and standardization

Classification according to the Pressure Equipment

Directive

The inline filters for hydraulic applications according to 51403 are pressure-holding equipment according to article 1, section 2.1.4 of the Pressure Equipment Directive 97/23/EC (PED). However, based on the exception in article 1, section 3.6 of the PED, hydraulic

filters are exempt from the PED if they are not classified higher than category I (guideline 1/19). The fluids from the chapter “Compatibility with approved hydraulic fluids” were considered for the classification. They do not receive a CE mark.

Use in explosive areas according to directive 94/9/EC (ATEX)

The inline filters according to 51403 are not devices or components in the sense of directive 94/9/EC and are not provided with a CE mark. It has been proven by the ignition risk analysis that these inline filters do not have own ignition sources according to DIN EN 13463-1:2009.

are simple electronic operating equipment that do not have their own voltage source. This simple electronic operating equipment may be used – according to DIN EN 60079-14:2012 – in intrinsically safe electric circuits (Ex ib) without marking and certification in systems. The inline filters and the electronic maintenance indicators described here can be used in the following explosive areas:

According to DIN EN 60079-11:2012, electronic maintenance indicators with a switching point:

WE-1SP-M12x1 **R928028409**
 WE-1SP-EN175301-803 **R928036318**

	Zone suitability	
Gas	1	2
Dust	21	22

Complete filter with mech./opt. maintenance indicator				
Use/assignment			Gas 2G	Dust 2D
Assignment			Ex II 2G c IIC TX	Ex II 2D c IIC TX
Conductivity of the medium	pS/m	min	300	
Dust accumulation		max	–	0.5 mm

Electronic switching element in intrinsically safe electric circuit				
Use/assignment			Gas 2G	Dust 2D
Assignment			Ex II 2G Ex ib IIC T4 Gb	Ex II 2D Ex ib IIIC T100 °C Db
Perm. intrinsically safe electric circuits			Ex ib IIC, Ex ic IIC	Ex ib IIIC
Technical data			Values only for intrinsically safe electric circuit	
Switching voltage	Ui	max	150 V AC/DC	
Switching current	Ii	max	1.0 A	
Switching power	Pi	max	1.3 W T4 T _{max} 40 °C	750 mW T _{max} 40 °C
		max	1.0 W T4 T _{max} 80 °C	550 mW T _{max} 100 °C
Surface temperature ¹⁾		max	–	100 °C
Inner capacity Ci			Neglectable	
Inner inductivity Li			Neglectable	
Dust accumulation		max	–	0.5 mm

¹⁾ The temperature depends on the temperature of the medium in the filter and must not exceed the value specified here.

Directives and standardization

Possible circuit according to DIN EN 60079-14

⚠ WARNING!

- ▶ Explosion hazard due to high temperature!
The temperature depends on the temperature of the medium in the hydraulic circuit and must not exceed the value specified here. Measures are to be taken so that the max. permissible ignition temperature is not exceeded in the explosive area.
- ▶ When using the inline filters according to 51403 in explosive areas, sufficient potential equalization has to be ensured. The filter is preferably to be grounded via the mounting screws.
It has to be noted in this connection that coatings and oxide protective layers are not electrically conductive.
- ▶ During filter element exchanges, the packaging material is to be removed from the replacement element outside the explosive area

👉 Notices:

- ▶ Maintenance only by specialists, instruction by the machine end-user according to DIRECTIVE 1999/92/EC appendix II, section 1.1
- ▶ Functional and safety warranty is only applicable when using original Hengst spare parts
